import re import glob import sys import time import json file_path = sys.argv[1] with open(file_path, 'w') as f: for dirpath, dirnames, filenames in os.walk('/home/h'): for filename in filenames: if filename.endswith('.json'): print(filename) f.write(re.sub('.json', '', filename)) time.sleep(5) For this script to work, you must provide the file path containing the.json files. The line f.write(re.sub('.json', '', filename)) is used to replace all the.json filenames with an empty string. Otherwise, you get the following output: file_path = 'c:/users/h/Desktop/happy_day/' for dirpath, dirnames, filenames in os.walk(file_path): for filename in filenames: print(filename) c:/users/h 82157476af
